

Welcome fullstack tribe!

Your mission, should you choose to accept it, is to implement the quiz up application given in the link down below.

<https://airtribe-quizup.netlify.app/>

We have already done all the basic heavy lifting for you by giving you a starter code for your mission. Utilise it and complete the project.

Please make note of the below points to start

- You **do not** need to make any changes in your index.html file
- You **do not** need to make any changes in your css files as well.
- Inside of script.js, there are various functions left blank. **Your task is to complete the functionality of these functions so that the quiz up app starts working.**
- You will be tested thoroughly with your knowledge of DOM manipulations. And because I am a good Game Master, I have decided to share with you relevant resources for you to help in your mission.
- This is going to be challenging at first, but with proper planning you are bound to succeed.

Good luck, and may the force be with you!

Refer to the links down below to start working on the project

1. [Basic DOM manipulation methods](#)
2. [Basics of radio buttons in HTML](#) (for the options 😎)
